CHAPTER 1

PROBLEM STATEMENT

1. Problem Statement

We lack an online platform for the welfare of pets, though every individual now seemingly has a pet, so formalizing it through the internet will engage community engagement and promote the welfare of pets. One important aspect of pet care involves buying and selling of pets and animal welfare organizations find it difficult in recovering and gaining sponsors for animals.

Problem Analysis:

This project started with the above problem statement. The following challenges exist are:

1. **Trust and Safety Concerns:** Trust and safety are significant concerns when it comes to pet adoption and selling. Users want to ensure that they are dealing with legitimate pet owners or adoption agencies. Without proper verification processes or transparency, users may hesitate to engage with the portal, fearing scams or unethical practices.
2. **Lack of Information and Communication:** Potential adopters require comprehensive information about the pets available for adoption, including their breed, age, health condition, vaccination status, and temperament. Additionally, effective communication channels, such as messaging systems or contact details, should be provided to facilitate discussions between pet owners and potential adopters.
3. **Lack of Integration with Local Shelters and Rescues:** Many pet adoption portals fail to integrate with local animal shelters and rescue organizations. This limits the availability of pets for adoption and restricts the portal's reach. By partnering with shelters and rescues, the portal can provide a wider selection of pets and contribute to animal welfare initiatives.
4. **Limited Adoption/Selling Support:** Users often require assistance throughout the adoption or selling process. The portal should offer reliable customer support, including guidance on adoption procedures, advice on pet care, and assistance in completing adoption/selling documentation. Without proper support, users may face challenges and abandon the process.

5. **Lack of Education and Resources:** Many users, especially first-time pet owners, may lack knowledge about pet care, training, and other related topics. The portal should provide educational resources, such as articles, videos, or FAQs, to help users make informed decisions and provide proper care for their pets.

Here are potential solutions to address the problems identified in the pet adoption and selling portal:

1. **Establish Trust and Safety Measures:**

- a. Implement a robust verification process for both pet owners and adoption agencies to ensure their legitimacy.
- b. Provide transparency by displaying information such as the source of the pet, vaccination records, and health certificates.
- c. Create a reporting system for users to flag suspicious or unethical listings, and promptly investigate and address such reports.

2. **Improve Information and Communication:**

- a. Require comprehensive pet profiles with detailed information about breed, age, medical history, temperament, and any specific requirements.
- b. Offer guides or templates for adoption agreements or contracts to ensure clear communication and understanding between parties.

3. **Partner with Local Shelters and Rescues:**

- a. Establish partnerships with local animal shelters and rescue organizations to expand the pool of available pets.
- b. Provide a dedicated section or integration with shelter databases to promote pets available for adoption through these organizations.

4. **Offer Adoption/Selling Support:**

- a. Provide comprehensive guides and resources on the portal to educate users about pet adoption, responsible pet ownership, and the adoption process.
- b. Offer customer support channels, such as live chat, email, or phone, to assist users with inquiries, guidance, and issue resolution throughout the adoption or selling process.

5. **Provide Education and Resources:**

- a. Create a section on the portal dedicated to educational resources, including articles, videos, and FAQs, covering various topics such as pet care, training, and behaviour.
- b. Collaborate with veterinary professionals or trainers to provide expert advice and guidance to users.

By implementing these solutions, the pet adoption and selling portal can enhance user experience, increase trust and engagement, and promote successful adoptions and sales.

CHAPTER 2

SOFTWARE REQUIREMENT SPECIFICATION

2. Software Requirement Specification

1. Abstract:

The system is a pet adoption and selling portal that enables users to buy, sell, and adopt pets effortlessly. This platform incorporates a pet matching algorithm, leveraging user preferences to suggest the ideal pets for potential owners. Experience a seamless interface, transparent pet profiles, and a focus on responsible pet ownership.

2 Introduction

2.1 Purpose

The purpose of this document is to describe the external requirements for a pet adoption and selling portal. It also describes the interfaces for the system.

2.2 Scope

This document is the only one that describes the requirements of the system. It is meant for use by the developers and will be the basis for validating the final delivered system. Any changes made to the requirements in the future will have to go through a formal change approval process. The developer is responsible for asking for clarifications, where necessary, and will not make any alterations without the permission of the client.

2.3 Definitions, Acronyms, Abbreviations

Not applicable.

2.4 References

Not applicable.

2.5 Developer's Responsibilities

The developer is responsible for (a) developing the system, (b) installing the software on the client's hardware, (c) conducting any user training that might be needed for using the system, and (d) maintaining the system for a period after installation.

3 General Description

3.1 Product Functions Overview

The system is to get the input data from the user that includes his lifestyle, climatic conditions and other preferences and maps with the pet attributes stored in the database and generates a compatibility score or preference score for each pet and lists it to the user. The user has the option to buy the pets. The user also can post his pet for sale in the system. The system includes a feature for posting the pets available for sponsorship or adoption and the user can choose it. The system allows community interaction between various users and allows the users to view and post community events. The system has a set of pet care tips and videos that are available to the user. The system also connects the user with the data about the closely available pet care centers or clinic.

3.2 User Characteristics

The main users of this system will be the public, who are interested in pets and are expecting a system with a GUI

3.3 General Constraints

Not applicable.

3.4 General Assumptions and Dependencies

Not applicable.

4. Functional Requirements

1. User Registration and Preference Input:

- This functionality allows users to create an account by providing their necessary details such as name, contact information, and preferences.
- Users can input their lifestyle information, climatic conditions, and other preferences for a pet through a user-friendly interface.
- The system stores this information for personalizing the pet matching process.

2. Matching Algorithm and Compatibility Score Calculation:

- The system employs an algorithm that compares the user's input data (preferences) with the attributes of available pets stored in the database.
- The algorithm identifies pets that match the user's preferences based on their attributes.
- A compatibility score or preference score is assigned to each matching pet to

quantify the level of compatibility between the pet and the user's preferences.

- The scoring mechanism considers factors like how closely the pet's attributes align with the user's preferences and weights the importance of different attributes based on the user's indicated priorities.

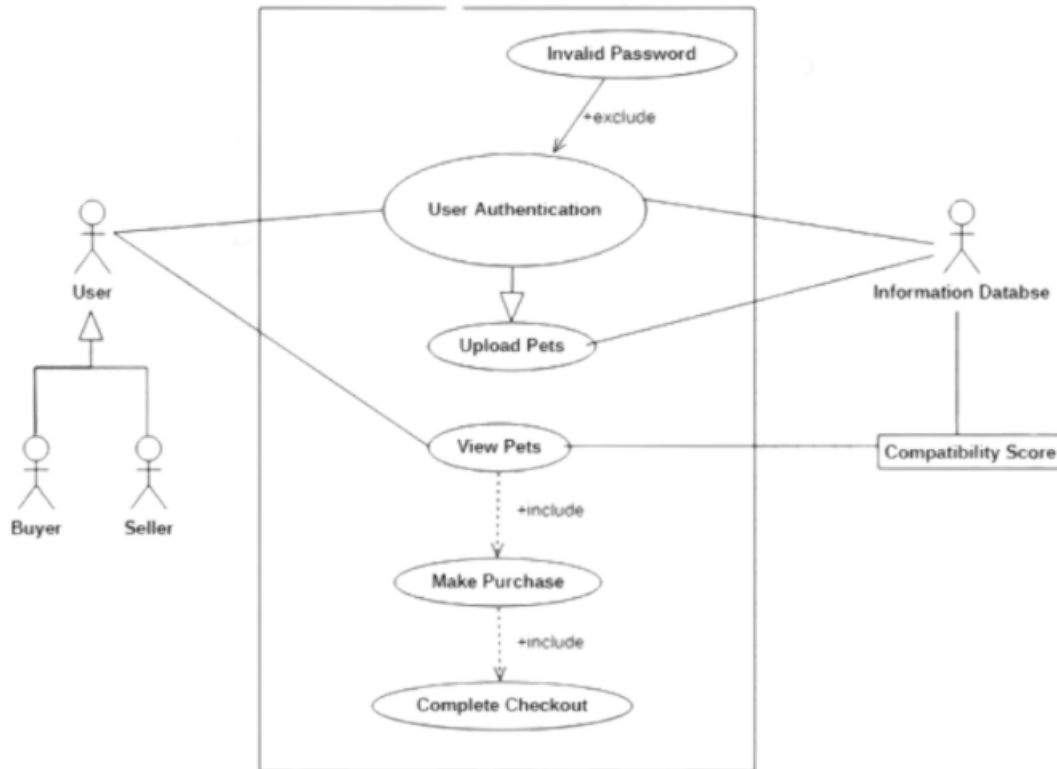

3. Displaying Matching Pets and Pet Availability:

- Once the matching algorithm and compatibility score calculation are completed, the system displays a list of pets that match the user's preferences.
- The list is sorted by the compatibility scores, with the most compatible pets displayed first.
- If no pets directly match the user's preferences, the system displays pets with relatively high compatibility scores.
- The system also handles ties in compatibility scores by displaying pets in a predetermined order, such as the storage schema.
- Pet availability is tracked to ensure that no two users can adopt or purchase the same pet at the same time. Pets are marked as unavailable once a user selects or adopts them.

CHAPTER 3

USE CASE MODEL

3. Use Case Model

3.2 Use Case Description:

Use Case Name: Make Purchase

Actors: Buyer, Seller, System

Preconditions: The user is authenticated and has selected a pet to buy.

Main Flow:

1. The system calculates the compatibility score between the buyer and the pet based on their profiles and preferences.
2. Pet db returns a list of matching pets from the available sellers
3. Pet recommender displays the list of matching pets to the user with their details and photos
4. The system displays the compatibility score and the pet details to the

buyer.

5. The buyer confirms the purchase and enters their payment information.
6. The system validates the payment information and processes the transaction.
7. The system updates the information database and marks the pet as sold.
8. The system notifies the seller and the buyer of the successful purchase and provides them with each other's contact information.
9. The use case ends.

Postconditions:

The buyer owns the pet and can arrange for its delivery or pickup with the seller. The seller receives the payment and can rate the buyer.

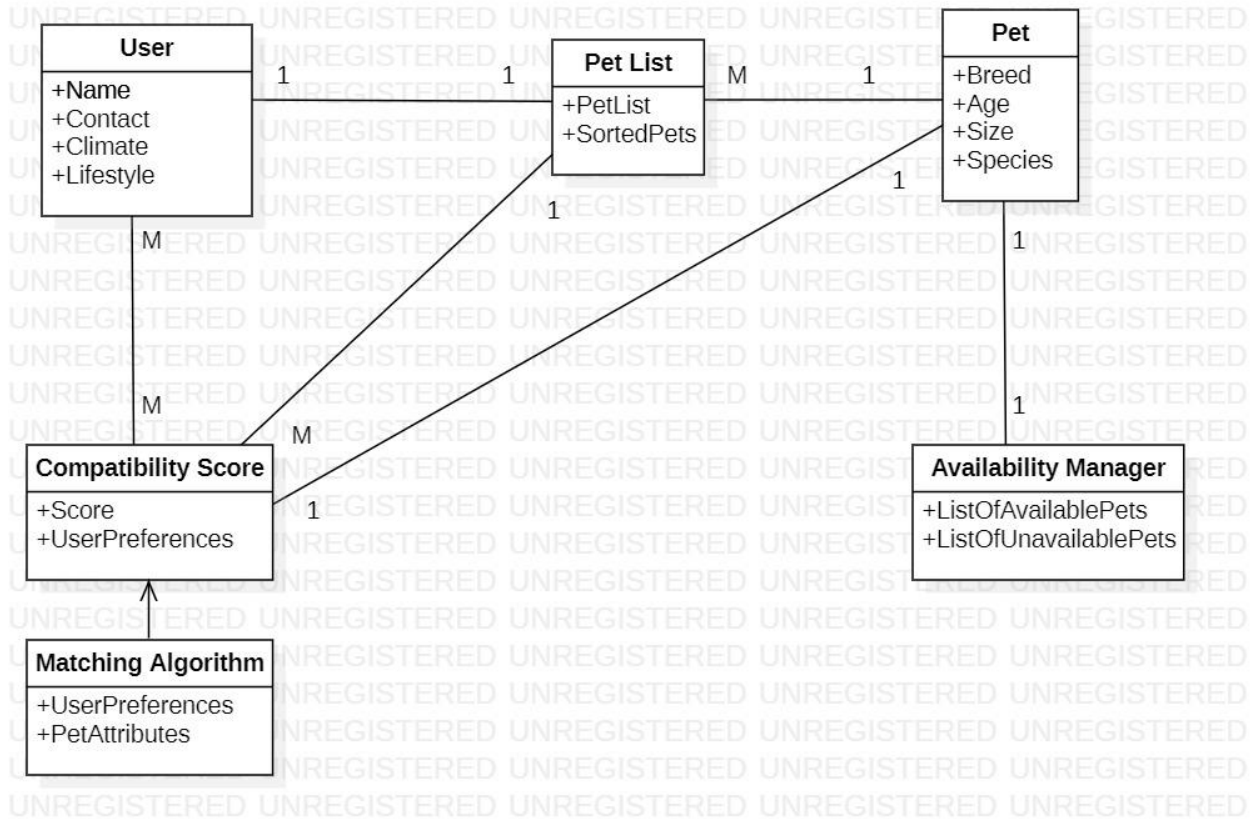

Alternative Flows:

1. If the compatibility score is below a certain threshold, the system warns the buyer and asks them to reconsider their purchase or choose another pet.
2. If the buyer cancels the purchase at any point, the system returns them to the previous screen and restores the pet's availability status.
3. If the payment information is invalid or the transaction fails, the system displays an error message and asks the buyer to try again or use a different payment method.
4. Pet recommender asks the user some questions about their preferences and lifestyle

User Preference Survey

1. What is your daily time commitment for pet care?

- ☐ Less than 30 minutes
- ☐ 30 minutes to 1 hour
- ☐ More than 1 hour

2. What is your living space like?

- ☐ Apartment or Small Condo
- ☐ House with a Yard
- ☐ Rural Area with Open Space

3. How active is your lifestyle?

- ☐ Very Active (Frequent outdoor activities)
- ☐ Moderately Active (Some outdoor activities)
- ☐ Sedentary (Minimal outdoor activities)

4. What are your personal preferences for pets?

- ☐ Dogs
- ☐ Cats
- ☐ Birds
- ☐ Reptiles

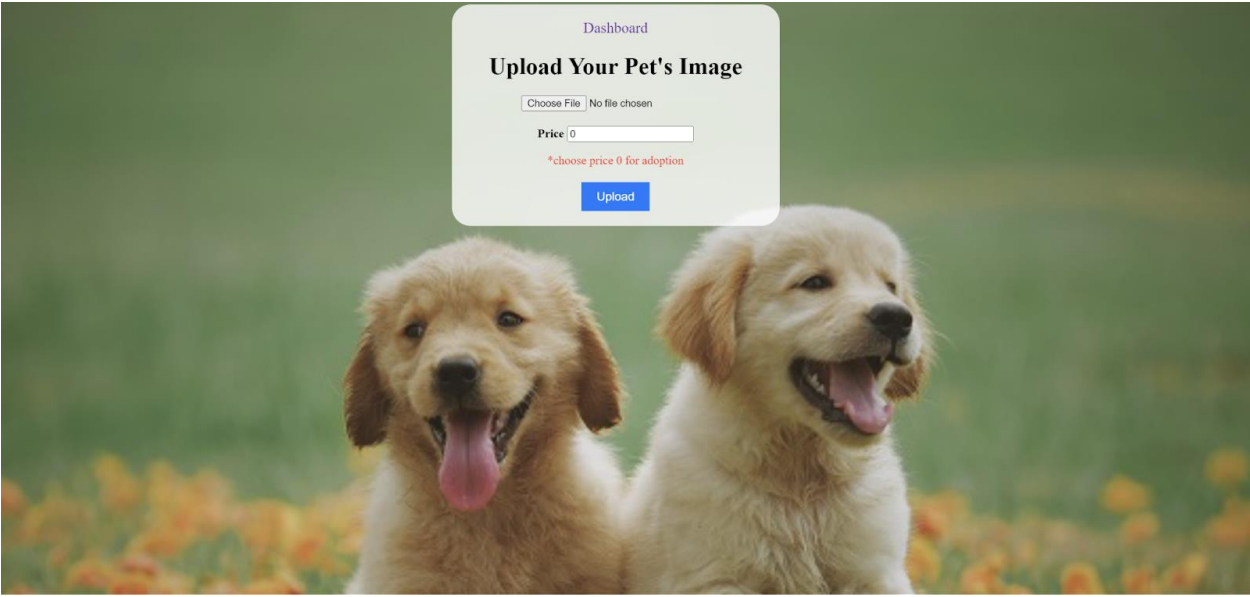

5. How often do you travel?

- ☐ Frequently
- ☐ Occasionally
- ☐ Rarely
- ☐ Never

6. How tolerant are you to noise?

- ☐ Very Tolerant
- ☐ Moderately Tolerant
- ☐ Low Tolerance

CHAPTER 13

CONCLUSION

13. Conclusion

In conclusion, the development and implementation of the Pet Adoption and Selling Portal have not only addressed the immediate need for a user-friendly platform for connecting pet lovers with their ideal companions but have also contributed to the promotion of responsible pet ownership and animal welfare. This project has been a significant step towards creating a positive impact on the lives of pets and their future owners.
